CUSTOMER PAYS TAXES, USF FEES AND OTHER FEES IN ADDITION TO RATES SHOWN.

By purchasing a prepaid SIM card or voucher, the Purchaser understands that he or she is entering into a prepaid service agreement with Outfitter Satellite, Inc., and the Purchaser acknowledges having read the Terms and Conditions included in all pages of this agreement including those incorporated by reference and located at <http://www.OutfitterSatellite.com/adobe/TermsConditions.pdf> and agrees to be bound thereby. If the Purchaser is acting in a representative capacity, the Purchaser agrees that the entity he or she is representing will be bound thereby and further represents and warrants that he or she is a duly authorized representative that has full authority to bind said entity.

GENERAL TERMS: Customer's prepaid account is billed for all data and calls sent or received through the BGAN terminal. Standard IP access sessions are billed in 20 KB increments with 100 KB minimum (per session). Voice, ISDN and Streaming IP are billed in 15 second increments with a 30 second minimum per call. Monthly call details are not available with this service. Short Message Service (SMS) messages have a 160-character limit, and charges apply for each addressed recipient. Other call types not shown in the rate chart above are at different rates or not allowed on this plan. It is the customer's responsibility to know the rate for the call before making the call. PSTN means public switched telephone number. Standard IP data service is offered on a best effort basis without a data rate guarantee; KB means kilobyte of data; MB means megabyte of data; CDR means call detail record. ISDN services include: circuit-switched data calls at 56 kbps, 64 kbps or 3.1 kHz Audio. Any existing prepaid account balance will be lost if the customer switches to any other plan so it is advisable to exhaust the prepaid balance before changing plans. Streaming IP data services have a quality of service over the Inmarsat space leg, but the Customer is advised that once streaming data leaves the Inmarsat point of presence (PoP), no quality of service is guaranteed. It is the Customer's responsibility to arrange a leased line that can assure quality of service for the streaming data from the Inmarsat PoP to the end destination.

VALIDITY RULES: When the prepaid account is first established, the Expiration Date of the prepaid usage on the prepaid account is the date determined by the Validity Period of the first voucher applied to the prepaid account as measured from the date that voucher was applied. Each time an additional voucher is applied to the prepaid account, the Expiration Date becomes the later of the Expiration Date before the voucher is applied or the date determined by the Validity Period of the voucher as measured from the date it was applied. Unused units of prepaid usage roll forward until the Expiration Date is exceeded at which point any units of prepaid usage that remain are lost at midnight UTC time on the Expiration Date. If the prepaid balance reaches zero, the Expiration Date is set to that day's date. **Example #1:** Two 50-unit 90-day Validity Period vouchers are added on July 1, 2016; this results in an Expiration Date 90 days later on September 29, 2016 because the Validity Periods of different vouchers do not add together. **Example #2:** On July 1, 2016 a 50-unit 90-day Validity Period voucher is applied to a prepaid account that originally had an Expiration Date of December 15, 2016. The Expiration Date remains December 15, 2016 because a voucher only extends the Expiration Date if its Validity Period exceeds the current Expiration Date.

FUTURE RELOADS: Reload vouchers can be purchased on Outfitter Satellite's online store. Outfitter Satellite is not responsible for the loss of any units of prepaid usage if a reload voucher order is made less than (2) BUSINESS DAYS prior to the Expiration Date.
